Keshan Hasaranga Dias | Hasaranga Dias | Keshan Hasaranga

SUMMARY

Final-year Computer Networks and Cyber Security undergraduate with hands-on experience in vulnerability assessments, network penetration testing, web application security, and DevSecOps automation. Experienced with Burp Suite, OWASP ZAP, Nmap, Metasploit, and security scanning tools including Semgrep and Checkov. Developed a unified security scanning platform integrating SAST, DAST, and IaC scanning into a GitLab CI/CD pipeline, with Python-based vulnerability classification and decision logic. Seeking to contribute to web, API, and infrastructure security assessments while strengthening practical penetration testing and vulnerability management skills.

WORK EXPERIENCE

Production System Project Lead (promoted from Software Engineering Intern)
Aug 2025 – July 2026

- Conducted security vulnerability assessments across two enterprise systems (CPWMS, OQP Systems), identifying and helping remediate issues in a live production environment.
- Worked hands-on with Windows Server environments and Active Directory concepts while managing application hosting and deployment on Microsoft Azure.
- Took full ownership of the OQP Systems codebase after a senior developer's departure, independently handling development, debugging, and release management.
- Automated deployment workflows using CI/CD (GitHub Actions, Azure DevOps) and scripted operational tasks in Python and PowerShell.

EDUCATION

BSc (Hons) Computer Networks & Cyber Security — **2022 – Present (Final Year)**

KIU University, Sri Lanka

- Completed 108 credits of 126 credits

Bachelor of Software Engineering — **2021 - Present**

Open University of Sri Lanka

- Completed 105 credits of 130

Diploma in Office Applications and Web — **2021 - 2022**

IDM Southern Campus

Advanced Level – Physical Science — **2006 - 2020**

Richmond College Galle

TECHNICAL SKILLS

- **SOC & Security Operations:** Alert Triage, Security Event Analysis, Incident Reporting, Incident Response Fundamentals, SOC Workflows, Phishing Analysis, Security Monitoring
- **SIEM & Security Analytics:** Elastic Stack, Splunk, SIEM Fundamentals, Log Analysis, Security Alert Investigation, Microsoft Sentinel
- **Endpoint Security:** EDR Fundamentals, Endpoint Telemetry Analysis, Endpoint Threat Detection
- **SOAR & Automation:** SOAR Fundamentals, Security Automation, Incident Response Workflow Automation

- **Security & Network Analysis & API Security:** Nmap, Wireshark, Burp Suite, Metasploit, OWASP ZAP, Semgrep, Checkov, Postman, OWASP API Security Top 10, PortSwigger labs
- **Scripting & Programming:** Python, Bash, PowerShell, SQL, PHP, .Net, React, Next.JS, Java
- **Systems & Networking:** Linux (Ubuntu, Kali Linux), Windows Server, Active Directory, DNS (BIND9), SSH, Firewalls (UFW/iptables), TCP/IP
- **Cloud & DevOps:** AWS (EC2, S3, IAM, VPC), Microsoft Azure, Docker, GitLab CI/CD, GitHub Actions, Terraform
- **Security Frameworks & Methodologies:** MITRE ATT&CK, Incident Response Fundamentals, Security Operations Workflows, Cyber Kill Chain, OWASP Top 10, GDPR, ISO 27001 principles

CYBERSECURITY LAB EXPERIENCE

- **Network Penetration Testing (Metasploitable 2) :** used Nmap for reconnaissance and service enumeration, then Metasploit to identify and exploit vulnerabilities, documenting the full attack chain from scanning through privilege escalation.
- **Digital Forensics Investigation (Autopsy) :** Performed file-system analysis and recovered hidden artifacts to reconstruct incident timelines and identify indicators of compromise.
- **Linux & Network Administration:** configured static networking (Netplan), a BIND9 DNS server, hardened SSH access, captured and analyzed traffic with tcpdump, and implemented firewall rules (UFW/iptables), each written up in a formal lab report.

FEATURED PROJECT

- **TriGuardOps - DevSecOps Security Scanning Platform(Final Year Project, KIU University)**
  - Designed a unified security pipeline integrating SAST (Semgrep), DAST (OWASP ZAP), and IaC scanning (Checkov) into a single GitLab CI/CD pipeline.
  - Built a Python-based decision engine that classifies vulnerabilities by severity and issues BLOCK / WARN / PASS verdicts, giving developers a structured way to act on findings.
  - Deployed the full stack (Flask, React, PostgreSQL) on AWS EC2 with Nginx and Gunicorn; extended the platform with a fine-tuned AI model (CodeT5, BLEU 57.51) that proposes automated fixes for detected vulnerabilities.

- **AI-Driven Phishing Detection System Using Machine Learning (Group Project | KIU University Sri Lanka)**
  - Designing and implementing a machine learning-driven solution to identify phishing attempts within emails and web-based platforms. This project emphasizes the use of supervised learning models to recognize harmful patterns and mitigate the risk of social engineering, thereby strengthening cybersecurity in digital communication channels.

CERTIFICATIONS & TRAINING

- **TryHackMe :** certified in Security Analyst Level 1 (SAL1)
- **TryHackMe :** completed cybersecurity rooms covering SOC Level 1, DevSecOps, Web Application Pentesting, OWASP Top 10, Network Security, Pipeline Automation, OWASP ZAP, Docker, and IaC, MITRE ATT&CK
- **AWS Educate :** IAM, S3, EC2, VPC, RDS, Lambda, CloudWatch fundamentals
- **Cisco Network Academy:** Ethical Hacker
- **HTB**: Completed 10 + Rooms
- **HackerRank** : certified in Python, Linux Shell, Java, SQL

LEADERSHIP & ACHIEVEMENTS

- **President —** Faculty of Computer Science & Engineering Student Circle (FOCSEC), KIU University
- **Treasurer —** Richmond College Science Society
- **Colours Award —** Richmond College, Galle
